● ABOUT ME

Final-year Bachelor of Computing (Honours) in Software Engineering undergraduate at the University of Sri Jayewardenepura with hands-on experience in designing, developing, and testing web, mobile, and AI-powered applications using Java, Python, JavaScript, Flutter, React, SQL, and RESTful APIs, supported by a solid foundation in software engineering principles, object-oriented programming, and the Software Development Life Cycle (SDLC). Built academic and personal projects involving full-stack development, machine learning, and mobile applications using modern frameworks and development tools. Passionate about building reliable, scalable software solutions and eager to contribute as a Software Engineering Intern while continuously expanding my technical expertise.

● PROJECTS

27 MAY 2026 - CURRENT

Sinhala Speech & Text to Sinhala Sign Language Translator (Final Year Research)

- Designing and developing a mobile application that translates Sinhala speech and text into Sinhala Sign Language using Natural Language Processing (NLP).
- Integrating a FastAPI backend with a Flutter frontend to support real-time translation workflows.
- Implementing 3D avatar animation to visualize translated Sinhala Sign Language gestures.
- Applying software engineering principles to develop a scalable and user-focused solution for improving communication accessibility.
- Collaborating through an iterative development process while continuously enhancing application functionality and usability.

31 JAN 2026 - 10 MAY 2026

Student Counseling and Mental Health Support System

- Engineered a full-stack MERN web application to support university student counseling through appointment scheduling, secure communication, and mental health resource management.
- Architected responsive React.js interfaces with role-based authentication, counselor profiles, wellness awareness sections, and modern UI components to improve usability across desktop and mobile devices.
- Implemented RESTful APIs and MongoDB integration to manage appointments, anonymous messaging, user accounts, and application data while maintaining secure and efficient data processing.
- Developed an analytics dashboard using Recharts to visualize monthly appointments, counseling service distribution, and administrative insights, alongside management modules for students, counselors, and contact requests.
- Collaborated in an Agile team using Git and GitHub, following software engineering best practices to build a modular, maintainable, and scalable application.
- GitHub Repository: <https://github.com/Akila-Prabath/Student-Counseling-System>

15 JUN 2025 - 31 OCT 2025

Heart Attack Risk Predictor (Group Project)

- Designed and developed a machine learning web application to predict heart attack risk using a healthcare dataset containing 158,355 patient records and 28 features.
- Implemented data preprocessing, feature engineering, and model evaluation using Scikit-learn to prepare data for machine learning models.
- Optimized the Support Vector Machine (SVM) model through hyperparameter tuning, improving its accuracy to 73.0%, while contributing to the evaluation of multiple algorithms that identified XGBoost as the best-performing model.
- Developed a Flask-based web interface for real-time predictions and containerized the application using Docker to support consistent deployment.
- Collaborated with a multidisciplinary team using GitHub for version control, code integration, and project coordination.
- GitHub Repository: <https://github.com/Akila-Prabath/Heart-Attack-Predictor>

8 SEP 2024 - 29 AUG 2025

University Canteen Management System (Group Project)

- Contributed as a Software Tester to the development of a university canteen management system, supporting software quality assurance throughout the Software Development Life Cycle (SDLC).
- Developed and executed unit tests using Vitest and React Testing Library to verify React component functionality, form validation, and user registration workflows.
- Conducted integration and end-to-end testing using Selenium WebDriver to validate order processing, authentication, and interactions between frontend and backend components.
- Validated RESTful APIs with Postman by testing request validation, error handling, and HTTP response codes (201 Created, 400 Bad Request, and 409 Conflict) to ensure backend reliability.
- Reported software defects, collaborated with developers using Git and GitHub, and contributed to delivering a reliable, maintainable, and user-friendly application.
- GitHub Repository: <https://github.com/Akila-Prabath/nextapp>

● SKILLS

Technical Skills

Java | Python | JavaScript | SQL | HTML | CSS | React.js | Next.js | Flutter | Node.js | Express.js | Laravel | REST Api's | MySQL | MongoDB | OOP | Software Testing | SDLC

Tools & Technologies

Git | GitHub | Android Studio | Docker | Postman | Vitest | React Testing Library | Selenium WebDriver | Jupyter Notebook

● EDUCATION & TRAINING

12 Jun 2023 - Current - SRI LANKA

BACHELOR OF COMPUTING (HONOURS) IN SOFTWARE ENGINEERING- UNIVERSITY OF SRI JAYEWARDENEPURA

Website: <https://www.sjp.ac.lk>

● CERTIFICATIONS

2 JUN 2025 Meta

Programming in Python

Online - Credential ID 8UC1JN5JTFDV

15 SEP 2024 IBM

Introduction to Web Development with HTML, CSS, JavaScript

Online - Credential ID S1JUGZGTSK5B

● PUBLICATIONS

A Review of AI and NLP Approaches for Sinhala Speech and Text to Sinhala Sign Language Translation Using 3D Avatar Animation
2026

Published in University Library Repository. Jayewardenepura Computing Symposium – 2026 (JCoS 2026)

● LANGUAGE SKILLS

Mother tongue(s): **SINHALA**

Other language(s): **ENGLISH**
